The present invention describes a neovascularisation agent (1), which has an activin stimulator as an active component. Also described: (1) an antiacovascularisation agent (I1) containing an activin inhibitor as an active component; and (2) a neovascularisation regulator comprising (1) and (11). The neovascularisation agent (1) can be used to prevent or treat ischaemic conditions, atherosclerosis, occlusive arteriosclerosis, lower limb vascular occlusion, myocardial infarction, angina pectoris, cerebral embolism, recalitrant skin ulcers; and diabetes, through pancreatic islet cell regeneration. The anti-neovascularisation agent (11) can be used to prevent or treat diabetic retinopathy, senile macular degeneration, chronic rheumatoid arthritis, cancer, psoriasis vulgaris.
                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
          Agents promoting or suppressing neovascularization containing activin stimulator or activin inhibitor, to treat ischemic conditions, diabetes and skin ulcers, or rheumatoid arthritis, diabetic retinopathy and

The invention relatives to a putition polypophilar, included within the invention relatives to a putition polypophilar, including sequences to consideration agreedatum or Thraustochytrium aureum. Also included are nucleotide sequences encoding the desaturases (including sequences 50% similar to them), a vector comprising the desaturase including sequence, a host cell comprising the vector, a transgenic plant cell or tissue comprising the vector and thereby producing PUFA via expression of the desaturase of the vector and thereby producing PUFA via expression of the desaturase of consolar-according purphy will be consolar acid and docosahexaenoic acid, produced using the desaturase. The desaturase protein and nucleotide are useful for producing the final product PUFA comegae-docosapentaenoic acid, or docosahexaenoic acid from the substrate CF PUFAs linoled acid, gamma-linolenic acid, stearidonic acid, dihomo-gamma-linolenic acid, elecated from the substrate CF PUFAs linoled acid, gamma-linolenic acid, elecated, adrenic acid, docosapentaenoic acid and docosahexaenoic acid. The composition is useful for treating or preventing a condition caused by insufficient intake of arthritis, asthma, psoriasis, osteoporosis, kindrey or urinary tract contest, cancer, cachexia associated with cancer, diabetes, eczema, gastrointestinal bleeding, endometriosis and premenstrual syndrome, continuamentory skin disorders). The omegae-bocosapentaenoic acid and docosabentaenoic acid may be added to nutritional compositions of acquired immunodeficiency syndrome (AlDS), multiple sclerosis and acquired innermatory syndrome (AlDS), multiple sclerosis and acquired immunodeficiency syndrome (AlDS), multiple acid and docosabented and became acquired and docosabented and become acquired and accompanition and acquired and accompanition and acquired and accompanition and accompanitions and acquired and accompanition and accompanitions and acquired and accompanition and accompanitions accompanitions and accompanitions and accompanitions accompani
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

                                                                                                                                                               The present invention relates to a human artificial chromosome, which can artificial chromosome carries the antibody lambda light chain gene (originally from the human chromosome 22) ligated to another chromosome fragment from another human chromosome. The human artificial chromosome can be used to generate transgenic mice, which are useful for producing human antibodies and in developing human antibody drugs for treatment of e.g. infections. The present sequence is a PCR primer, which was used in an example from the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               antitumour; diagnosis; phosphorothioate; psoriasis; spermine; spermidine;
                                                         Artificial human chromosome containing human antibody lamda light chain gene transferred to offspring via non-human genital system for constructing transchromosomic mice, applicable in developing human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New oligo:nucleotide derivs. specific for S-adenosyl:methionine decarboxylase related nucleic acid - useful as anti:sense inhibitors of this enzyme, esp. for treatment of tumours but also as hybridisation

                                                                                                                                                                                                                                                                                                                               ò
                                                           oligomucleotide which targets the 3' untranslated region of 8-
adenosylmethionine decarboxylase (SAMDC) around nucleotides at positions
1046 to 1065. Antisense oligomucleotide analogues (AARB6500-14) which
target the SAMDC gene are used to diagnose conditions associated with
expression of SAMDC by specifically hybridising to RNA or DNA derived
from the SAMDC gene. These antisense molecules are useful for therapeutic
modulation (especially inhibition) of SAMDC synthesis, particularly to
treat tumours (e.g. leukaemia, prostatic carcinoma, colon or brain
tumours, but especially bladder cancer), but also other hyper-
proliferative diseases such as psoriasis. They cause tumour regression
and prevent establishment/growth of (micro)metastases. Inhibition of
SAMDC reduces the level of polyamines (spermine and spermidine in cells),
resulting in cytostasis and possibly apoptosis
                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an antisense compound targeted to a nucleic acid molecule encoding acyl-coenzyme A synthetase 1 (ACS1). The antisense compound specifically hybridises with and inhibits the expression of ACS1. The antisense oligonucleotides or compounds are useful for inhibiting the expression of acyl-coenzyme A synthetase 1 (ACS1), and for treating diseases or conditions associated with aberrant expression of ACS1, e.g. diabetes, obesity, metabolic syndrome X, cardiovascular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New antisense compounds targeted to nucleic acid molecules encoding acylcoenzyme A synthetase 1 (ACS1), useful for treating diseases or conditions associated with aberrant expression of ACS1, e.g. diabetes,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an antisense compound targeted to a nucleic acid molecule encoding acyl-coenzyme A synthetase 1 (ACS1). The antisense compound specifically hyperidises with and inhibits the expression of ACS1. The antisense oligonucleotides or compounds are useful for inhibiting the expression of acyl-coenzyme A synthetase 1 (ACS1), and for treating diseases or conditions associated with aberrant expression of ACS1, e.g. diabetes, obesity, metabolic syndrome X, cardiovascular disorder or cancer. The antisense compounds are also useful as research reagents and kits, or in diagnostic, therapeutic and prophylactic applications, e.g. to prevent or delay infection, inflammation or tumour formation. The present sequence represents an acyl-coenzyme A synthetase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New antisense compounds targeted to nucleic acid molecules encoding acyloconzyme A synthetase 1 (ACS1), useful for treating diseases or conditions associated with aberrant expression of ACS1, e.g. diabetes, obesity or cancer.
disorder or cancer. The antisense compounds are also useful as research reagents and kits, or in diagnostic, therapeutic and prophylactic applications, e.g. to prevent or delay infection, inflammation or tumour formation. The present sequence represents an acyl-coenzyme A synthetase 1, ACS1, antisense oligonucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                  Gape
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Acyl-coenzyme A synthetase 1, ACS1, antisense oligonucleotide #3448.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            acyl-coenzyme A synthetase 1; ACS1; diabetes; obesity;

The invention relates to an antisense compound targeted to a nucleic acid molecule encoding acyl-coenzyme A synthetase 1 (ACS1). The antisense compound specifically hybridises with and inhibits the expression of ACS1. The antisense oligonucleotides or compounds are useful for inhibiting the expression of acyl-coenzyme A synthetase 1 (ACS1), and for treating diseases or conditions associated with aberrant expression of ACS1, e.g. diabetes, obesity, metabolic syndrome X, cardiovascular disorder or cancer. The antisense compounds are also useful as research reagents and kits, or in diagnostic, therapeutic and prophylactic applications, e.g. to prevent or delay infection, inflammation or tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New antisense compounds targeted to nucleic acid molecules encoding acyl-coenzyme A synthetase 1 (ACS1), useful for treating diseases or conditions associated with aberrant expression of ACS1, e.g. diabetes,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   formation. The present sequence represents an acyl-coenzyme A synthetase
1, ACS1, antisense oligonucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Diagnosis, therapeutic; mesoblast-specific transcript, Mest, adipocyte, obsetty, non-insulin dependent diabetes, arteriosclerosis, hypertension, hyperlipidemia; PCR, primer, es, antidiabetic; antiarteriosclerotic; hypotensive; antilipemic; anorectic.
                                 Acyl-coenzyme A synthetase 1, ACS1, antisense oligonucleotide #3466.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       molecule encoding acyl-coenzyme A synthetase I (ACSI). The antisense compound specifically hybridises with and inhibits the expression of ACSI. The antisense oligonucleotides or compounds are useful for inhibiting the expression of acyl-coenzyme A synthetase I (ACSI), and for treating diseases or conditions associated with aberrant expression of ACSI, e.g. diabetes, obesity, metabolic syndrome X, cardiovascular disorder or cancer. The antisense compounds are also useful as research reagents and kits, or in diagnostic, therapeutic and prophylactic applications, e.g. to prevent or delay infection, inflammation or tumour formation. The present sequence represents an acyl-coenzyme A synthetase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New antisense compounds targeted to nucleic acid molecules encoding acyl-coenzyme A synthetase 1 (ACS1), useful for treating diseases or conditions associated with aberrant expression of ACS1, e.g. diabetes,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an antisense compound targeted to a nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                Acyl-coenzyme A synthetase 1, ACS1, antisense oligonucleotide #3449.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               acyl-coenzyme A synthetase 1; ACS1; diabetes; obesity;

The present invention relates to a method for induction of osteoblastic differentiation in mammalian mesenchymal stem cells. The method comprises administration of at least one oxysterol (A). (A) is used to induce osteoblastic differentiation and inhibit adipocyte differentiation in mammalian mesenchymal stem cells and treat mammalian mesenchymal cells. (A) is administered at a selected interval together with at least one secondary agent (such as parathyroid hormone, sodium fluoride, insulinlike growth factor I, insulin-like growth factor I in insulin-like growth factor I in contense the differentiation of marrow stromal cells into osteoblasts and to increase the number of osteoblasts present in bone tissue, induce bone formation to increase bone mass and treat osteoporosis to ameliorate the symptoms of osteoporosis. In an example from the invention, adipogenesis was assessed by an inhibition of processes to the invention, adipogenesis was assessed by an inhibition of processes to the invention, adipogenesis was assessed by an inhibition of the processes to the invention.
                                                                                                                                  Use of oxysterol to induce osteoblastic differentiation and bone formation to increase bone mass and inhibit adipocyte differentiation in mammalian mesenchymal stem cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       expression of adipogenic genes lipoprotein lipsse (LPL) and adipocyte P2 (aP2) by (A) using PCR primers ADN00573-ADN00576.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     differentiation; stem cell; osteopathic; bone repair; bone degeneration; osteoporosis; aP2; adipocyte protein 2; PCR; primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Induction of osteoblastic differentiation of mammalian mesenchymal stem cells includes treating mammalian mesenchymal cells with at least one oxysterol and at least one morphogenic protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention relates to a novel method of induction of osteoblastic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a method of diagnosing obesity-related diseases comprising measuring the expression doses of mesoblast-specific transcript (Mest) in adipocytes. The invention also relates to a method of examining whether or not a test substance is a Mest expression controller comprising the administration of the test substance to an adjacytes of the animal or the amount of Mest protein in its blood and determining whether or not the test substance can cause a change in the Mest mRNA expression dose, and a method of screening a Mest expression controller. To assay the Mest expression dose, the amount of Mest protein in blood is measured. The method is underful in clinical examination and in screening of expression is useful in clinical examination and in screening of expression type II diabetes, arteriosclerosis, hypertension and hyperlipemia. This equance represents a PCR primer used to amplify Mest cDNA of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                            Diagnosing obesity-related diseases by measuring expression of mesoblast-
specific transcript (Mest) in adipocytes, useful in clinical examination
and in screening drugs in the treatment of, e.g. diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Osteoblastic differentiation induction; osteoblastic differentiation; mesenchymal stem cell; oxysterol; adipocyte differentiation inhibition; adipocyte differentiation; adipogenesis; adipogenic gene; lipoprotein lipase; LPL; adipocyte P2; aP2; murine; PCR; primer; ss.

                                                                                                                                   셤
                                                                                                                                                                                             differentiation of mammalian mesenchymal stem cells. The method includes treating mammalian mesenchymal cells with at least one oxysterol and at least one bone morphogenic protein (BMP). The invention may be useful for the development of compounds with an osteopathic activity acting as alipocyte differentiation of MSC inhibitors, osteoblastic differentiation of MSC inducers or Liver X receptors (LXR) activators. The invention may be useful to induce osteoblastic differentiation of mammalian mesenchymal stem cells (MSC), to stimulate mammalian cells to express a level of a biological marker of osteoblastic differentiation, to inhibit adipocyte differentiation of MSC, to increase the differentiation of marrow stromal contramentaneous bone formation) and to creat/amaliorate a patient exhibiting clinical symptoms of osteophorosis. The method is very effective in treating bone disorders without side effects. The present region of the mouse adipocyte protein 2 (ap2)-encoding gene in the exemplification of the invention.
                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a primer pool which includes at least two sets of primers for amplifying at least two target sequences of human MODY (maturity-onset diabetes mellitus in the young) gene 1, 4, 5, 6 or 7.                                        The present
primer pool, method and kit are useful for amplifying target sequences, specifically for amplifying human MODY gene 1, 4, 5, 6 or 7. The presen sequence is a primer used to amplify human MODY gene 1 exon 4 sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ап
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             short
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New short interfering nucleic acid molecule that directs cleavage of an early growth response RNA, useful for treating cancer, ocular disease, proliferative condition, renal disease or arteriosclerosis.
                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a chemically synthesized double stranded sho interfering nucleic acid (siNA) molecule that directs cleavage of an

ö
invention also relates to a composition comprising the siNA molecule with a pharmaccutical carrier or diluent. The siNA molecule is useful for treating tumor angiogenesis and cancer, e.g., breagt, lung, bladder, skin, and brain cancer, epithelial carcinoma, and melanoma. The molecule is also useful for treating diabetic retinopathy, age related macular degeneration, neovascular glaucoma, myopic degeneration, arthritis, psoriasis, endometriosis, famale reproductive disorders, vertuca wulgaris, angiofibroma, tuberous sclerosis, port-wine stains, Sturge-Weber syndrome, Klippel-Trenaunay-Weber syndrome, Neber-Rendu syndrome, renal disease, polycytic kidney disease, restenosis and arteriosclerosis. This sequence represents an Egr-1 siRNA molecule of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RNA interference; gene silencing; short interfering RNA; siRNA, brearly growth response; Egr-1; angiogenesis disorder; cancer; breast tumor; lung tumor; bladder tumor; skin tumor; brain tumor; begithelial carcinoma; melanoma; diabetic retinopathy; age related macular degeneration; neovascular glaucoma; myopic degeneration; arthritis; psoriasis; endometriosis; synecology and obstetrics; verruca vulgaris; angiofibroma; gynecology and obstetrics; verruca vulgaris; angiofibroma; Kilppel-Trenaunay-Weber syndrome; krippel-Trenaunay-Weber syndrome; krippel-Trenaunay-Weber syndrome; cranal disease; polycystic kidney disease; restenosis; arteriosclerosis; cytostatic; ophthalmological; antidiabetic; antiarthritic; osteopathic; antiangiogenic; antipaperoective; vasotropic; hemostatic; osteopathic; antiangiogenic; antipaporiatic; gynecological; menstatic; antiarteriosclerotic; nephrotropic; ds.

                                                                                                                                        The invention relates to a chemically synthesized double stranded short interfering nucleic acid (siNh) molecule that directs cleavage of an early growth response (Egr-1) RNA via RNA interference (RNAi). The invention also relates to a composition comprising the siNA molecule with a pharmaceutical carrier or diluent. The siNA molecule is useful for treating tumor angiogenesis and cancer, e.g., breast, lung, bladder, skin, and brain cancer, epithelial carcinoma, and melanoma. The molecule is also useful for treating diabetic retinopathy, age related macular degeneration, neovascular glaucoma, myopic degeneration, arthritis, psoriasis, endometriosis, female reproductive disorders, varuca vulgaris, angiofibroma, tuberous sclerosis, port-wine stains, Sturge-Weber syndrome, Klippel-Trenaunay-Weber syndrome, Osler-Weber-Rendu arteriosclerosis. This sequence represents an Egr-1 siRNA molecule of the

containing transfer to committee the Egr-1 gene by RNA interference. The siNAs may or may not comprise ribonucleotides, can contain decaytribonucleotides, can be chemically modified and may be contain decaytribonucleotides, can be chemically modified and may be double or single stranded. They further comprise sense and antisense contain decaytribonucleotide. Specifically, the siNAs include short harman single stranded and antisense oligonucleotide. Specifically, the siNAs include short cinterfering RNA (shRNA), double-stranded RNA, micro-RNA (miRNA) and short hairpin RNA (shRNA). The invention also relates to pharmaceutical compositions comprising an siNA targeted to the Human Egr-1 mRNA. The invention. The siNAs are used to modulate expression of invention further discloses expression vectors and host cells comprising an siNA targeted to used the Egr-1 gene in cells, tissue explants or organisms (for example by exvivo gene therapy), or in grafts and transplants for the treatment of containing with a cytostatic, antisants or organisms (for example by exvivo gene therapy), or in grafts and transplants for the development of compounds with a cytostatic, antisanthitic, vasotropic, antisflammatory, ophthalmological, antidiabetic, antisanthitic, vasotropic, antisflammatory, ophthalmological, antidiabetic, antisanthitic, cerebroprotective or antiatereriosclerotic activity acting by RNA interference. They may be used in the treatment of cancer (for example colorectal cancer (conjunctivitis, bacterial keratitis, vestic glaucoma and squamous cell carcinoma), tumor angiogenesis, and proliferative conditions such as adenocarcinoma, lymphoma and glioma), coular disease (for example to degeneration, arthritis, psoriasis, Sturge Weber syndrome, restenosis and/or arteriosclerosis. The siNAs may also be used in drug screening, degeneration, arthritis, psoriasis, Sturge Weber syndrome, restenosis and/or arteriosclerosis. The siNAs may also be used in drug screening, cengineering, pharmacogenomics, studying gene function and gen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      invention relates to chemically synthesized short interfering nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel chemically synthesized double-stranded short interfering nucleic acid molecule directing cleavage of early growth response-1 RNA by RNA interference, useful in treating cancer, ocular disease or restenosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              70.5%; Score 13.4; DB 14; Length 19; 86.7%; Pred. The invention relates to chemically synthesized short interfering nucleic acids (siNAs) which downregulate expression of the Egr-1 gene by RNA interference. The siNAs may or may not comprise ribonuclectides, can contain decoxyribonuclectides, can be chemically modified and may be double or single stranded. They further comprise sense and antisense an antisense or alternatively are assembled from a sense oligonuclectide specified an antisense oligonuclectide. Specifically, the siNAs include short interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short hairpin RNA (siRNA). The invention also relates to pharmaceutical compositions comprising an siNA targeted to the Human Egr-1 mana.
                                                                                                                                                                                            Novel chemically synthesized double-stranded short interfering nucleic acid molecule directing cleavage of early growth response-1 RNA by RNA interference, useful in treating cancer, ocular disease or restenosis.
                                                                                                                                                                                                                                                                                                                                                                                                         Claim 33; SEQ ID NO 94; 218pp; English.

```
cc an siNA of the invention. The siNAs are used to modulate expression of the Egr-1 gene in cells, tissue explants or organisms (for example by exvivo gene therapy), or in grafts and transplants for the treatment of a variety of conditions. The siRNAs may be useful for the development of compounds with a cytostatic, antiarthritic, vasotropic, antinflammatory, ophthalmological, antidiabetic, antipsoriatic, cerebroprotective or antiarteriosclerotic activity acting by RNA interference. They may be used in the treatment of cancer (for example colorectal cancer, adenocarcinoma, lymphome and glioma), ocular disease (for example toxic conjunctivitis, bacterial keratitis, uveitic glaucoma and squamous cell carcinoma), tumor angiogenesis, and proliferative conditions such as carcinoma), tumor angiogenesis, and proliferative conditions such as diabetic retinopathy, macular degeneration, age related macular carcinoma, arthritis, psoriasis, Sturge Weber syndrome, restenosis and/or arteriosclerosis. The siNAs may also be used in drug screening, diagnosis, therapeutic target identification and validation, genetic engineering, pharmacogenomics, studying gene function and gene mapping (for example of single nucleotide polymorphisms). The present sequence is that of a human Egr-1 gene-targeting siRNA of the invention.

(DNAS-) DNA SCI INC. (UYDU-) UNIV DUKE.

New nucleic acid molecule useful for identifying polymorphisms associated with CYP3A4, CYP3A5 or GSTM1 substrates which influence breast cancer treatments, comprises at least one base variation from human CYP3A4 or CYP3A5 sequence. Guida M, Hall J, Petros WP, Vredenburgh JJ, WPI; 2002-691652/74.

Colvin OM, Marks JR;

Example 3; Page 27; 41pp; English.

The invention relates to a nucleic acid molecule comprising at least one base variation from human cytochrome P450 (CYP) 3A4 or CYP3A5 sequence. Nucleic acid molecules of the invention are useful for identifying polymorphisms associated with CYP3A4, CYP3A5 or glutathione S-transferase

```
AAZ65654 to AAZ69578 represent human biallelic markers from the present invention, which contain a polymorphic base at position 24 of their nucleotide sequences. AAZ69579 to AAZ7440 represent amplification primers for the biallelic markers. The biallelic markers of the invention have a variety of uses: they can be used for high density mapping of the human genome, and in complex association studies and haplotyping studies which are useful in determining the genetic basis for disease states. Compositions and methods of the invention can also be useful for the identification of the targets for the development of pharmaceutical agents and diagnostic methods, as well as the characterisation of the differential efficacious responses to and side effects from pharmaceutical agents acting on a disease as well as other treatment.

          also useful in diagnostic purposes to identify individuals having a polymorphic genotype which influence the outcome of breast cancer treatments and the selection of chemotherapeutic agents used to treat breast cancer. The polymorphisms detected are used to screen altered metabolism of CYP3A4, CYP3A5 or GSTM1 substrates, potential drug-drug interactions, drug adverses effects, likelihood of successful clinical outcome following treatment with anti-cancer agents such as cisplatin, cyclophosphamide and/or BCNU. The present sequence is human promoter -147
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel biallelic markers used to construct a high density disequilibrium

The sequences given in ABA00318-27 are sequences which encode the N-D-N unstable angine (UA) patients. All these sequences have segments in unstable angine (UA) patients. All these sequences have shared amino acid sequence homology and display heterogeneity at the nuclectide level. Sequences like these were identified using the method of the invention for determining if a mammal has an unstable plaque. The method comprises determining whether or not a sample from the mammal contains an elevated level of a polypeptide which is encoded by a DNA responsive to an interferon-gamma-activated transcription factor. The level indicates that the mammal contains the unstable plaque. The method is useful in evaluating the severity of cardiovascular conditions, such as angina, specifically by determining whether a person has an unstable plaque. The method may also be used to identify compounds that are useful in treating or requiring the risk of developing life- threatening cardiovascular

The invention relates to a method of designing primers for simultaneous amplification of target DNA fragments in a single multiplex polymerase cofain reaction by aligning a first primer and a second primer. The method comprises: (a) aligning a first primer and a second primer; and (b) selecting the first primer and esecond primer; and (b) contain four or more bases that are perfectly matching to the 3' end does not contain seven or more bases that are perfectly matching to the first primer or a second primer, the first primer at its 3' end does not contain seven or more bases that are perfectly matching to except one mismatch to the 3' end sequence of the first primer or the second primer, and the first primer or the second primer, and the first primer or the second primer. The method is useful for designing primer or the second contain a sequence anywhere of the first primer or the second primer. The method is useful for designing primer or the second contain a sequence anywhere of the first primer or the second contain a sequence anywhere of the first primer or the second contain a sequence anywhere of the first primer or the second contain a sequence anywhere of the first primer or the second contain reaction of target DNA fragments in a single multiplaneous chain reaction. It is also useful in the identification of multiple genes are anyment or the second contain the second contain the second contain reaction. It is also useful in the identification of multiple genes are anyment or the second contain the second primer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           alterations, the studies in pharmacogenetic reactions, the genotyping genetic polymorphisms in a large population, the gene expression profiling in various samples and high throughput genotyping technologies.
                                                                                                                                                                                                                                                Designing primers for simultaneous amplification of target DNA fragments in a single multiplex polymerase chain reaction, for high throughput multiplex DNA sequence amplification, comprises aligning two primers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   BB; primer; simultaneous amplification;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This is the nucleotide sequence of primer IIa that is specific for NOXRI CDNA (see AAV72577) of Mycobacterium tuberculosis. Primer sets Ia and Ib (see AAV72584-85), and IIa and IIb (see AAV72581), were used in RT-PCR to demonstrate expression of recombinant NOXRI in Mycobacterium smegmatis and of native NOXRI in M. tuberculosis. NOXRI confers resistance to artibacterial reactive nitrogen and oxygen intermediates. NOXRI nucleic acids, polypeptides (see AAW83357) and antibodies can be used in the production of vaccines, in diagnostic methods, and in methods for treating septic hypotension and stroke, and for quenching overproduction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ss; primer; simultaneous amplification; single multiplex polymerase chain reaction; multifactorial disease; genetic alteration; pharmacogenetic reaction; genotyping; polymorphism; gene expression profiling.

This invention describes novel oligonucleotide primers or peptide nucleic acid (PNA) oligomers for detecting single nucleotide polymorphisms (SNP) and cytosine methylation status in chemically pretreated genomic DNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligomers are also used for detecting cell type differentiation. ABC00010-ABC99989, ABF00010-ABF9989, ABH00010-ABH99989 and ABI00010-ABI82073 tapeseent the oligomers described in the invention. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes novel oligonucleotide primers or peptide nucleic acid (PNA) oligomers for detecting single nucleotide polymorphisms (SNP)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SNP; single nucleotide polymorphism; human; diagnosis; PNA; cancer; CNS; peptide nucleic acid; cytosine methylation; cardiovascular; primer; ss; central nervous system; gastrointestinal; respiratory; immune; metabolic.
                                                                                                                                                      of oligonucleotides, useful for diagnosis and cell typing, igned to detect single-nucleotide polymorphisms and cytosine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Set of oligonucleotides, useful for diagnosis and cell typing, idesigned to detect single-nucleotide polymorphisms and cytosine methylation status.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Oligonucleotide SEQ ID NO 22110 for detecting SNP TSC0004396.
                                                                                                                                                                                                                                                                               Claim 1; SEQ ID NO 22109; 29pp + Sequence Listing; German.

                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a method of designing primers for simultaneous amplification of target DNA fragments in a single multiplex polymerase chain reaction by aligning a first primer and a second primer. The method comprises: (a) aligning a first primer and a second primer; and (b) selecting the first primer the first primer at its 3' end does not contain four or more bases that are perfectly matching to the 3' end sequence of the first primer or a second primer, the first primer at its 3' end does not contain seven or more bases that are perfectly matching to the does not contain seven or more bases that are perfectly matching to except one mismatch to the 3' end sequence of the first primer or the second primer, the first primer or the second primer, and the first primer or the second primer, and the first primer or the second primer, and the first primer at its 3' end does not contain six or more bases that are perfectly matching except one mismatch to a sequence anywhere of the first primer or the second primer. The method is useful for designing primers for simultaneous amplification of target DNA fragments in a single multiplex polymerase chain reaction. It is also useful in the identification of multiple genes the primer of the first primer or the second primer. The method is useful for designing primers for simultaneous amplification. It is also useful in the identification of multiple genes or the second primer and the factorion of genetic primer and the proposed or more bases that are perfectly matching second primer. The method is useful for designing primers for simultaneous amplification of target DNA fragments in the identification of multiple genes or the second primer and the proposed or more bases that are perfectly matching genes and the proposed or more bases that are perfectly matching genes or the second primer and 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            alterations, the studies in pharmacogenetic reactions, the genotyping genetic polymorphisms in a large population, the gene expression profiling in various samples and high throughput genotyping technologies. This sequence corresponds to an example of a primer of the invention.
                                                                                                                                                                                                                                            Designing primers for simultaneous amplification of target DNA fragments in a single multiplex polymerase chain reaction, for high throughput multiplex DNA sequence amplification, comprises aligning two primers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SNP; single nucleotide polymorphism; human; diagnosis; PNA; cancer; CNS; peptide nucleic acid; cytosine methylation; cardiovascular; primer; ss; central nervous system; gastrointestinal; respiratory; immune; metabolic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ઠ
and cytosine methylation status in chemically pretreated genomic DNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligomers are also used for detecting cell type differentiation. ABC0010 -ABC99889, ABF00010-ABF99899, ABH00010-ABF99899 and ABI00010-ABF82073 represent the oligomers described in the invention. NoTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from WIPO at fire printed specification, but ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Antisense oligonucleotide; nucleotides 1710-1729 and 3639-3658; muti-drug resistant-1; MDR-1; nucleotide binding sites; plasma membrane; glycoprotein; P170; inhibition; expression; treatment; cancer cells;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New oligo:nucleotide(s) complementary to the MDR-1 gene - used for preventing induction of multi:drug resistance or for treating multi:drug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present oligonucleotide is antisense to nucleotides 1710-1729 and 3639-3658 of the multi-drug resistant-1 (MDR-1) gene, which encode the nucleotide binding sites of the plasma membrane glycoprotein, P170. The oligonucleotide inhibits the expression of P170, and can therefore be used to treat MDR cancer cells, and prevent the induction of MDR in cancer cells and the expression of P170 in cells

```
Antisense oligonucleotide; nucleotides 1709-1729 and 3638-3657; muti-drug resistant-1; MDR-1; nucleotide binding sites; plasma membrane; glycoprotein; P170; inhibition; expression; treatment; cancer cells;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New oligo:nucleotide(s) complementary to the MDR-1 gene - used for preventing induction of multi:drug resistance or for treating multi:drug resistant cancer cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Antisense oligonucleotide; nucleotides 1708-1727 and 3637-3656; muti-drug resistant-1; MDR-1; nucleotide binding sites; plasma membrane; glycoprotein; P170; inhibition; expression; treatment; cancer cells; induction; prevention; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present oligonucleotide is antisense to nucleotides 1709-1729 and 3638-3657 of the multi-drug resistant-1 (MDR-1) gene, which encode the nucleotide binding sites of the plasma membrane glycoprotein, P170. The oligonucleotide inhibits the expression of P170, and can therefore be used to treat MDR cancer cells, and prevent the induction of MDR in cancer cells and prevent the induction of MDR in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

molecule comprising an isolated avian lysozyme gene expression control region operably linked to a nucleic acid insert encoding a polypeptide. The nucleic acid is useful for reducing the chromosomal positional effect of a transgene operably linked to the lysozyme gene expression control region and transfected into a recipient avian cell. The present sequence is a PCR primer used for sequencing chicken lysozyme gene expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides the protein and coding sequences of human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       melanin concentrating hormone receptor (MCH-R) interacting protein. The sequences can be used in the production of transgenic animals useful for studying appetite disorders and treatments. The present sequence is a coding sequence shown in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Zinc finger protein; MCH-R; MCH receptor; anorectic; appetite disorder; melanin concentrating hormone receptor interacting protein; gene; ds.
                                                                                                  invention relates to an isolated or recombinant nucleic acid or DNP
positional effect of a transgene, comprises an isolated avian lysozyme
                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New polynucleotide encoding melanin-concentrating hormone receptor interacting protein, useful for diagnosis of appetite disorders and screen for appetite regulators.
                                                                                                                                                                                                                                                                                                                                                               ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                      New oligo:nucleotide(s) complementary to the MDR-1 gene - used for preventing induction of multi:drug resistance or for treating multi:drug resistant cancer cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present oligonucleotide is antisense to nucleotides 1708-1727 and 3637-3656 of the multi-drug resistant-1 (MDR-1) gene, which encode the nucleotide binding sites of the plasma membrane glycoprotein, P170. The oligonucleotide inhibits the expression of P170, and can therefore be used to treat MDR cancer cells, and prevent the induction of MDR in cancer cells and the expression of P170 in cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    positional effect;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an antisense compound targeted to a nucleic acid molecule encoding acyl-coenzyme A synthetase 1 (ACS1). The antisense compound specifically hybridises with and inhibits the expression of ACS1. The antisense oligonuclectides or compounds are useful for inhibiting the expression of acyl-coenzyme A synthetase 1 (ACS1), and for treating diseases or conditions associated with aberrant expression of ACS1, e.g. diabetes, obesity, metabolic syndrome X, cardiovascular disorder or cancer. The antisense compounds are also useful as research reagents and kits, or in diagnostic, therapeutic and prophylactic applications, e.g. to prevent or delay infection, inflammation or tumour formation. The present sequence represents an acyl-coenzyme A synthetase 1, ACS1, antisense oligonucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                      New antisense compounds targeted to nucleic acid molecules encoding acyl-
coenzyme A synthetase 1 (ACS1), useful for treating diseases or
conditions associated with aberrant expression of ACS1, e.g. diabetes,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

```

```
The invention relates to an antisense compound targeted to a nucleic acid molecule encoding acyl-coenzyme A synthetase 1 (ACS1). The antisense compound specifically hypridises with and inhibits the expression of ACS1. The antisense oligonucleotides or compounds are useful for inhibiting the expression of acyl-coenzyme A synthetase 1 (ACS1), and for treating diseases or conditions associated with aberrant expression of ACS1, e.g. diabetes, obesity, metabolic syndrome X, cardiovascular disorder or cancer. The antisense compounds are also useful as research reagents and kits, or in diagnostic, therapeutic and prophylactic applications, e.g. to prevent or delay infection, inflammation or tumour formation. The present sequence represents an acyl-coenzyme A synthetase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New antisense compounds targeted to nucleic acid molecules encoding acylocaryme A synthetase 1 (ACS1), useful for treating diseases or conditions associated with aberrant expression of ACS1, e.g. diabetes,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Antisense oligonucleotide; nucleotides 1708-1729 and 3637-3658; muti-drug resistant-1; MDR-1; nucleotide binding sites; plasma membrane; glycoprotein; P170; inhibition; expression; treatment; cancer cells; induction; prevention; 8s.

chosen from any one of 553 fully defined 15-100 nt sequences given in chosen from any one of 553 fully defined 15-100 nt sequences given in specification, generating an extension product from the primer set having a mutation or polymorphism, and analyzing the extension product. The causance of a genetic marker in the cystic fibrosis transmembrane conductance regulator (CFTR) gene of a subject, which involves providing a DNA sample from the subject, providing at least one primer set that is any number between 1-75 nucleotides upstream or downstream of a primer set described in the specification, contacting the comprises a region of primer set, generating an extension product that comprises a region of primer set, generating an extension product that comprises a region of primer set, generating an extension product that specification of the genetic marker, separating the extension product on a gel, and identifying the presence or absence of the specification to identify the presence or absence of a mutation or polymorphism on a CFTR gene. The method and primer set described in the cystic fibrosis transmembrane conductance regulator gene of a subject. This polymorphism is the cystic fibrosis transmembrane conductance regulator gene of a subject. This polymorphism detection of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human immunodeficiency virus; HIV; inhibition; replication; human topoisomerase I; human topo I; treatment; prevention; PCR primer;

                                                                                                                                                                                                                                                                                                                                                                                The present oligonucleotide is antisense to nucleotides 1708-1729 and 3637-3658 of the multi-drug resistant-1 (MDR-1) gene, which encode the nucleotide binding sites of the plasma membrane glycoprotein, P170. The oligonucleotide inhibits the expression of P170, and can therefore be used to treat MDR cancer cells, and prevent the induction of MDR in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        fibrosis transmembrane conductance regulator gene, by contacting nucleic acid and primer set, producing extension product, analyzing product for mutation or polymorphism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a novel method for identifying the presence/absence of a mutation or polymorphism in the cystic fibrosis transmembrane conductance regulator (CFTR) gene of subject. The method

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a new mammalian ATP-binding cassette gene 5 (ABCG5) polypeptide. The invention is useful for identifying a predisposition for developing sitosterolemia, arteriosclerosis or heart disease. The molecules of the invention are also useful for identifying a compound which alters ABCG5 activity level comprising contacting a cell compound which alters ABCG5 activity level comprising contacting a cell culture or mammal which have ABCG5 polypeptide with a compound and mammal, where an increase or decrease in ABCG5 biological activity compared to ABCG5 biological activity in a control cell culture or in mammal, where an increase or decrease in ABCG5 biological activity compound that increases or decreases ABCG5 activity respectively. The cell culture or mammal of decreases ABCG5 activity respectively. The cell culture or mammal comprises a mutated ABCG5 polypeptide or a wild type polypeptide. The comprises a mutated ABCG5 polypeptide or a wild type polypeptide in a cell culture or mammal comprising a wild type ABCG5 polypeptide or second cell culture or mammal comprising a wild type ABCG5 polypeptide. Stimulation of ABCG5 activity is useful for treating or preventing the presenting a hypersterolemia, arteriosclerosis, heart disease and/or Alzheimer's disease. The method of the invention is useful for increasing cholesterol cell culture and adsorption. The present nucleic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a novel method for constructing a comprehensive p53 mutant gene library. The method comprises carrying out a first PCR using an oligonuclectide specifying mutation induction as a primer, and then carrying out a second PCR using the PCR product obtained from first PCR as a megaprimer, and cloning the PCR product thus obtained into a gap repair vector. The method of the invention may be useful for constructing a comprehensive p53 mutant gene library. The mutant gene library thus obtained, is useful for preparing nucleic acid arrays and analyzing the p53 gene. The current sequence is that of a mutagenic PCR primer of the invention which was used to amplify, and thus introduce a single mutation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Constructing a mutant p53 gene library by performing first PCR using oligonucleotide specifying mutation induction as primer, performing second PCR using product of first PCR, as megaprimer and PCR cloning
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ONA library; DNA microarray; mutagenesis; PCR; primer; ss; p53 gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Mutagenic PCR primer used to amplify human p53 cDNA - SEQ ID 510.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents a potential triple-helix forming region. It can be used to demonstrate the assay of the invention. The assay comprises adding a sample containing double-stranded DNA test sequences, e.g. containing the present sequence, to an aqueous medium containing at least one complex of anchor DNA, attached to a solid support, and reporter DNA, where either a part of the anchor DNA or reporter DNA is designed to form a triple-strand structure with part of the test sequence. Triplex formation results in displacement of the reporter DNA which is detected as an indication of the presence of the DNA test
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              sequence. The method is used to detect DNA sequences, particularly for identification of bacteria (by detecting genes for ribosomal RNA) in clinical samples, but also detection of oncogenes and Hepatitis B virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Pancreas disease; metabolic disorder; obesity; syndrome x; analgesic; antianginal; insulin dependent diabetes mellitus; non-insulin dependent diabetes; antidiabetic; anorectic; cytostatic; antiinflammatory; gene therapy; diagnosis; antisense therapy; DG219;

The invention relates to secreted factors referred to as DG008, DG065, CC DG210 and DG239 ADX58911-ADX58918, which are involved in pancreas development, regeneration, and in the regulation of energy homeostasis. These were identified in a screen for secreted factors expressed in developing mammalian (mouse) pancreas. A claimed pharmaceutical composition comprises a DG008, DG055, DG210 or DG239 protein (or functional fragment), and/or an effector/modulator of the protein or functional fragment), and/or an effector/modulator of the protein or functional fragment), and/or an effector/modulator of the protein or functional fragment), and/or an effector/modulator of the protein or functional fragment), and/or an effector/modulator of the protein or functional fragment) and/or notein of pancreatic disasse (e.g. diabetes such as insulin of perention of pancreatic disasses (e.g. diabetes such as insulin competity, metabolic syndrome (syndrome x) and/or other metabolic diseases or dysfunctions. It can also be used for the manufacture of an agent for the modulation of pancreatic development or for the regeneration of composition of pancreatic development or for the regeneration of control in vivo or in vitro. The invention also provides a non-human control of increased or reduced, recombinant host cells, amended of identifying a control of seconds of screening for an agent the effects/modulates the activity of method of screening for an agent the effects/modulates the activity of control of seconds of screening for an agent in the regulation with a binding target.

The present sequence is that of a Tagman probe for mouse DG239. This was control of the present sequence in the invention in a quantitative analysis of the present sequence is that of a Tagman probe for mouse DG239 is the present sequence is that of a Tagman probe is developed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New pharmaceutical composition having a DG008, DG065, DG210 or DG239 protein and/or encoding nucleic acid molecule, useful for diagnosing, preventing or treating pancreatic diseases, such as diabetes, obesity and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ..

produce a HER-2 isoform fusion protein.

```
The present invention relates to a method for identifying antibodies for target proteins. The method comprises: (1) contacting an antibody-coated solid surface with a fusion protein, where the antibodies bind contacting to the fusion protein, where the antibodies bind solid surface with a fusion protein and the fusion protein, where the presence of specifically to the target protein linked to a carrier protein, and (11) conducting an assay to determine the presence of the carrier protein may be an isoform of a protein that is associated with disease, e.g. Vascular soforms (PSA), which are associated with prostate cancer and Herz (PSA), ADW28645), which is associated with breast cancer. Also claimed are (PSA), ADW28645), which is associated with breast cancer. Also claimed are mithody binds to a target protein, specifically at least one monoclonal antibody that binds to an isoform of a protein that is associated with a carrier protein and some contact of antibody that binds to an isoform of a protein that is associated with a clisease; isolating (M3) an antibody binding specifically at least one monoclonal antibody that binds to an isoform of a protein the is associated with a clisease; isolating (M3) an antibody binding specifically to a target protein, as associated with the nucleic acid(s) encoding the antibody determining (M4) the presence of an antibody to a particular molecule of an antibody to a particular molecule of carrier protein antibodies are useful for tracting or preventing cliseases in which the presence of an antibody to a particular molecule sequence of an antibody to a particular molecule sequence of an antibody to a particular molecule sequence of an antibody to a particular and identifying (M5) and incompanied and identified by (M1) are useful for tracting and are useful for tractment of diseases such as contact protein isoforms used for prevention or tractment of diseases such as cancer, theumatoid arthitis, ordarian cancer, protein isoforms used for prevention or tractment of diseases and 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Identifying antibody to protein, involves contacting solid surface coated with antibodies with fusion protein having portion of target protein and carrier protein and conducting assay to determine presence of carrier
                                                                                                                                                                                                                                                                                                                                                                                  Cytostatic, Antirheumatic, Antidiabetic, Cardiant, Nootropic, Neuroprotective, antibody identification, antibody production, antibody therapy, cancer; 88.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to short interfering nucleic acids (siNA) which downregulate expression of the one or more telomerase genes by RNA interference. The siNAs may or may not comprise ribonucleotides and may be double or single stranded. They further comprise sense and antisense regions, or alternatively are assembled from a sense oligonucleotide and an antisense oligonucleotide. Specifically, the siNAs include short interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short hairpin RNA (shRNA). The siNAs can be unmodified or chemically modified, can contain deoxyribonucleotides, and can be chemically synthesised, expressed from a vector or enzymatically synthesised. The invention also relates to kits for the in vitro or in vivo delivery of siNA; conjugates and/or complexes of siNA; and vectors that express siNA. The siNAs are used to modulate expression of the telomerase genes in cells, tissue

New short interfering nucleic acid downregulates expression of the telomerase gene useful e.g. for treatment and diagnosis of cancer.

The invention relates to short interfering nucleic acids (siNA) which downregulate expression of the one or more telomerase genes by RNA interference. The siNAs may or may not comprise ribonucleotides and may Example 3; SEQ ID NO 321; 145pp; English.

regions, or alternatively are assembled from a sense oligonucleotide and an antisense oligonucleotide. Specifically, the siNRs include short interfering RNs (siRNs), double-stranded RNs, micro-RNs (miRNs) and short hairpin RNs (shRNs). The siNas can be unmodified or chemically modified, can contain deoxyribonucleotides, and can be chemically synthesised, expressed from a vector or enzymatically synthesised. The invention also relates to kits for the in vitro or in vivo delivery of siNs, conjugates and/or complexes of siNs, and vectors that express siNs. The siNas are explants or organisms (e.g., by ex vivo gene therapy), or in grafts and transplants for the treatment of a variety of conditions. They may be used for treating cancer, restenosis, infectious diseases (specifically protozoal), transplant rejection, or autoimmune or age-related diseases, e.g. multiple sclerosis, lupus erythematosus, AIDS, macular degeneration, skin ulcers and rheumatoid arthritis. The siNAs are also useful for drug screening, diagnosis, therapeutic target identification and validation, genetic engineering, pharmacogenomics, studying agene function, and gene mapping (e.g., of single nucleotide polymorphisms). The present sequence represents the lower strand of a human TERT-targeted double-stranded double or single stranded. They further comprise sense and antisense sina. \$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$

The invention relates to short interfering nucleic acids (siNA) which downregulate expression of the human G72 gene by RNA interference. The siNAs may or may not comprise ribonucleotides and may be double or single stranded. They further comprise sense and antisense regions, or alternatively are assembled from a sense oligonucleotide and an antisense oligonucleotide. Specifically, the siNAs include short interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short hairpin RNA (siRNA). The siNAs can be unmodified or chemically modified, can contain ector or enzymatically synthesised. The invention also relates to kits for the in vitro or in vivo delivery of siNA; conjugates and/or complexes for the in vitro or in vivo delivery of siNA; conjugates and/or complexes of siNA; and vectors that express siNA. The siNAs are used to modulate expression of the G72 gene in cells, tissue explants or organisms (e.g., by ex vivo gene therapy), or in grafts and transplants for the treatment of a variety of conditions. The human G72 siNAs have neuroleptic activity and can be used for treating schizophrenia. The siNAs are also useful for drug screening, diagnosis, therapeutic target identification and valudation, and gene mapping (e.g., of single mulcleotide polymorphisms). The present sequence represents the upper strand of a human G72-targeted double-stranded siNA, which is identical to the G72 transcript target
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
              New short interfering nucleic acid, useful e.g. for treatment and diagnosis of schizophrenia, downregulates expression of the G72 gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RNA interference; short interfering nucleic acid; siNA; short interfering RNA; siRNA; double stranded RNA; micro-RNA; miRNA; short thairpin RNA; shRNA; expression modulation; gene therapy; diagnosis; therapeutic target identification; pharmacogenomics; gene function analysis; gene mapping; neuroleptic;

The invention relates to short interfering nucleic acids (siNA) which downregulate expression of the human G72 gene by RNA interference. The siNAs may or may not comprise ribonuclectides and may be double or single stranded. They further comprise sense and antisense regions, or alternatively are assembled from a sense oligonuclectide and an antisense coligonuclectide. Specifically, the siNAs include short interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short hairpin RNA (shRNA). The siNAs can be unmodified or chemically modified, can contain deoxyribonuclectides, and can be chemically synthesised, expressed from a vector or enzymatically synthesised. The invention also relates to kits for the in vitro or in vivo delivery of siNA; conjugates and/or complexes of siNA; and vectors that express siNA. The siNAs are used to modulate expression of the G72 gene in cells, tissue explants for the treatment of a variety of conditions. The human G72 siNAs have neuroleptic activity and can be used for treating schizophrenia. The siNAs are also useful for drug screening, diagnosis, therapeutic target identification and validation, genetic engineering, pharmacogenomics, studying gene tunction, and gene mapping (e.g., of single nucleotide polymorphisms).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      short interfering RNA; siRNA, G72; RNA interference; gene silencing; neuroleptic; antisense therapy; Amino acid oxidase; schizophrenia; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                            New short interfering nucleic acid, useful e.g. for treatment and diagnosis of schizophrenia, downregulates expression of the G72 gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ő

The invention relates to a novel chemically synthesized double stranded short interferring nucleic acid (siNA) molecule that directs cleavage of a G72 RNA via RNA interference (RNAI). Each strand of the siNA molecule is 18-23 nucleotides in length, and one strand of the siNA molecule is Comprises a nucleotide sequence having sufficient complementarity to the C72 RNA for the siNA molecule to direct cleavage of the G72 RNA via RNA interference. The invention also includes a composition comprising the siNA cited above in a pharmaceutical carrier or diluent. The siNA oligos interference. The invention also includes a composition comprising the methods and compositions of the present invention are useful for modulating G72 and/or D-amino acid molecules, in particular for diagnosing or treating conditions that respond to modulation of G72 and/or DAAO expression or activity, such as schizophrenia. This oligo sequence represents a G72 cleavage directing siNA molecule complement
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New chemically synthesized double stranded short interfering nucleic acid (siNA) molecule directing cleavage of a G72 RNA via RNA interference (RNAi), useful in diagnosing or treating schizophrenia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 19 BP; 4 A; 8 C; 2 G; 0 T; 5 U; 0 Other;

cleavage directing siNA molecule complement

Sequence 19 BP; 5 A; 2 C; 8 G; 0 T; 4 U; 0 Other;

sequence/target of the invention.

represents a G72

```
The invention relates to a novel chemically synthesized double stranded short interfering nucleic acid (siNA) molecule that directs cleavage of a G72 RNA via RNA interference (RNA) molecule that directs cleavage of a 18-23 nucleotides in length, and one strand of the siNA molecule is comprises a nucleotide sequence having sufficient complementarity to the G72 RNA for the siNA molecule to direct cleavage of the G72 RNA via RNA interference. The invention also includes a composition comprising the siNA cited above in a pharmaceutical carrier or diluent. The siNA oligos have neuroleptic activity and are useful in antisense therapy. The methods and compositions of the present invention are useful for modulating G72 and/or D-amino acid oxidase (DAAO) gene expression using bort interfering nucleic acid molecules, in particular for disappnessing or treating conditions that respond to modulation of G72 and/or DAAO expression or activity, such as schizophrenia. This oligo sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New chemically synthesized double stranded short interfering nucleic acid (siNA) molecule directing cleavage of a G72 RNA via RNA interference (RNAi), useful in diagnosing or treating schizophrenia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Mcswiggen J, Beigelman L, Haeberli P;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 33; SEQ ID NO 16; 127pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (SIRN-) SIRNA THERAPEUTICS INC
